

Scenario 3: Decoherence + loss

Scenario 3: Decoherence + loss | Pump power: 200.0 mW | Squeezing parameter: $r = 1.4142$ | Total transmissivity η : 0.7943 |
Intrinsic (pre-loss): 12.28 dB | Observed (post-loss): 5.98 dB |
Loss moves squeezing toward vacuum limit ($\text{Var} = 0.5$). Intrinsic magnitude is always $\geq$ observed after loss.
